Dear Hiring Manager,

I am a Bachelor of Software Engineering student at Seneca Polytechnic, seeking a Summer 2027 Software Engineering internship where I can apply my technical knowledge, contribute to meaningful projects, and continue developing as a software engineer.

My technical foundation includes Python, C++, JavaScript, HTML, CSS, SQL, object-oriented programming, and relational databases. Through my coursework and personal projects, I am developing practical experience in software development, debugging, and version control using Git and GitHub.

I am currently building DevPortfolio, a responsive personal website featuring interactive JavaScript components, dynamically generated project cards, and mobile-friendly navigation. I am also developing ScholarTrack, a full-stack academic dashboard designed to help students manage courses, assignments, and academic performance. These projects reflect my interest in creating practical software solutions while strengthening my frontend, backend, and database development skills.

Beyond programming, my professional experience at ServiceOntario and Concentrix has strengthened my ability to investigate problems, communicate clearly, follow detailed procedures, and work with sensitive information responsibly. As a bilingual English and French speaker, I am comfortable collaborating with people from different backgrounds and explaining complex information in an accessible way.

I am excited about the opportunity to contribute to a software engineering team, learn from experienced developers, and apply my growing technical skills to real-world challenges.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my technical foundation, projects, and professional experience could contribute to your organization.

Sincerely,
Chris Yvan Igaba
